PROFILE

I design B2B platforms (fintech, payments, HR), e-commerce sites and mobile apps, from user research, user flows and prototypes to UI and visual design, design systems and developer handoff. My largest research: a survey of 63 people and a prototype test on TON Walk, a prototype test with 8 civil servants for an HR platform, and a usability test with 22 people for a real estate agency

WORK EXPERIENCE

Product designer, Mish · August 2025 - present · full-time, remote · design studio

- The HR platform for civil servants (client under NDA) was hard to use and had no mobile version. A full redesign for desktop, tablet and phone: news feed, workplace, profiles, staff directory, learning, knowledge base; two versions, about 2,000, then 800 screens. Released on 3 November 2026, users from 9 November
- Research on my own and with the team: an audit of the old platform, similar products, interviews, the client's research data and support requests, CJM and JTBD. I ran a usability test of the clickable prototype with 8 civil servants on 9 tasks and ranked the findings by severity and frequency; the most common one, unclear section names, came up with all 8. After the test we wrote down the needs and changed how the next concept is built, for example banners on the home page can now be hidden
- The design system, made with a second designer: developers built every screen with it; 604 variables, 116 component sets
- Sign-in, recovery and registration for web and phone, plus error pages: 37 states each and 9 error pages. A review of the studio's build of the news feed, from spacing to broken navigation: about 50 notes
- I review every screen that Claude in Figma builds from the client's requirements and our design system: moving flows from the old design to the new one took a couple of hours instead of over a day
- Concepts (clients under NDA): a dating service built around events, with a review of similar apps and three review rounds with the client; since October 2026, a new B2C product, from stakeholder interviews to prototype tests

Product designer, contract and freelance projects · January 2022 - June 2026

Freelance · March 2025 - June 2026 · alongside my main job

- UXdevice and Miningx100 (see Selected projects). For UXdevice: client interviews, analytics from the client's documents, usability and A/B tests with the client's customers and partners

O.dev (Oshka) · January 2025 - July 2025 · contract

- A product studio. TON Walk (see Selected projects): the only product designer, working with the product owner, product managers, QA and developers
- An internal B2B finance platform (see Selected projects)

SidePay and CoinUp · May 2024 - January 2025 · contract · two products of one employer

- CoinUp, October 2024 - January 2025, the only product designer: an iGaming mobile app with mini games, duels and real-money bets. My MVP audit showed that games were hard to find, and after it the team fixed the home page; tests with more than 300 of the client's customers and friends showed demand for new mini games and a new home screen. For the second version I added search and sections to the home screen and reworked the structure, the entry through a Telegram bot, the onboarding and the duel cards
- SidePay, May 2024 - October 2024, alongside my full-time job at Raduga Light: a B2B payments platform. I interviewed 20-25 managers and staff, mapped the roles and flows and made a customer journey map in Miro; in prototype tests with future clients, drag and drop seemed hard, so we moved it up, level with the heading. I built the UI kit and led a second designer; the team worked in English

Mirkvartir · UX/UI designer · May 2023 - January 2024 · contract

- A real estate agency. A redesign of the whole website: an online usability test with 22 of the agency's clients and staff gave a list of small fixes across the site, such as the property cards; the search, a UI kit

Freelance · UX/UI designer · January 2022 - 2023

- UX concepts, interviews, usability tests, prototypes and handoff for different clients

UX/UI designer, Raduga Light · January 2024 - September 2024 · full-time · lighting equipment maker

- A B2B catalog with two configurators, a request cart and an organisation account, more than ten websites and landing pages; A/B tests in Yandex Metrica, surveys in Telegram; I extended the company's design systems. Part of the requests now come through the configurators, and managers get them with the specs already chosen

SELECTED PROJECTS

Design system for a public-sector HR platform · 2025-2026

One of two designers

- An audit of 24 components of a ready-made library, after which the client chose to build its own system. The header with navigation and most of the basic components are mine. Developers get the variables as a file exported from Figma and keep their own component library in code, built to match the system

Internal B2B finance platform · 2025, four months

- At O.dev, under a lead designer. My decisions: the layout and the drag and drop features, in constant touch with the lead. The home page with finance widgets (balances in several currencies, turnover, exchange rate differences) and the deals section with list and Gantt views and a 13-column table with filters, bulk actions and export; two sign-in flows. I extended its design system. About 230 people at the client now use it instead of Excel

UXdevice, a marketplace for robots · 2026, three months

The only designer, freelance

- In the catalog I argued for one list with a "Show more" button over pagination; the client agreed. 16 pages in four screen sizes and all graphics; a design system with three levels of design tokens; a review of the studio's build in three rounds (25 issues, then 8, then 3), after which the studio fixed all my notes except minor ones. Live since June 2026, with more than 100 requests through the site

TON Walk, a walk-to-earn game inside Telegram · 2025, three months

The only product designer

- A survey of 63 people: 62% did not understand how earning works. Earnings became TON per kilometre, shown first on the walk screen. In the prototype test in three groups, 87% understood how to earn and about nine in ten completed the task. MVP released: more than 2,000 players at launch, 12k+ subscribers in Telegram

Miningx100, an online store for mining hardware · March 2025 - 2026

The only designer, private client

- A 7-stage CJM named a long order form and unclear payback among the pains; on the site, a request takes two fields and the calculator shows payback per model. 60+ screens; six landing pages; the calculator from desktop to phone; a design system. Live since February 2026; after it the client hired me for UXdevice

This portfolio site: my Figma design, built with Claude Code; I reviewed every change · 2026

SKILLS

Design: product design, UX/UI design, UI and visual design, interaction design, user flows, information architecture, wireframes, prototyping, responsive web, mobile apps (Apple HIG, Material Design), Telegram Mini App

Design systems: components and variants, design tokens as Figma variables, light and dark themes, UI kits

Research: interviews, surveys, usability testing, prototype tests, A/B tests, UX audits, competitor reviews, CJM, JTBD

Delivery: developer handoff, design QA of the built product, accessibility: contrast checks against WCAG AA

Domains: fintech and payments, B2B platforms for HR, e-commerce, mobile games, crypto and iGaming

Tools: Figma (variables, components, Auto Layout, prototypes), Photoshop, Illustrator, Notion; **AI:** Claude in Figma via MCP, Claude Code, Grok

Languages: English B2, German B1, Russian native

EDUCATION

IT HUB, a private college · 2022-2025 · vocational diploma, the program "Design (by industry)"

Preparing for a bachelor's in International Business Administration at WU Vienna, from 2028, alongside full-time work
