PROFILE

I build design systems and interfaces for B2B platforms, e-commerce sites and mobile apps, from user research and prototypes to developer handoff. When a studio builds my layouts, I check the build and file each mismatch as a ticket. I have run user research on two projects: a survey of 63 people and a prototype test on TON Walk, and a usability test with 22 people for a real estate agency.

WORK EXPERIENCE

Product designer, Mish (design studio) · August 2025 – present · full-time, remote

- A full redesign of a public-sector HR platform for civil servants (client under NDA): every page of the platform, from an outdated, hard-to-use interface to a new one. In development, release in November 2026.
- Its design system, built with a second designer, is part of the redesign: 604 variables and 116 component sets; developers already build screens with it.
- Worked with the development team; user research came from the client.
- A concept for a dating service built around events (client under NDA).
- Since October 2026: a concept for a new B2C product.

Product designer, O.dev (studio) · January 2025 – July 2025 · contract

- TON Walk, a walk-to-earn game inside Telegram: the only product designer, from a survey of 63 people to the design system and handoff, working with the product owner, product managers, QA and developers.
- An internal B2B finance platform, four months, working under a lead designer. I designed the deals section, with list and Gantt views and a 13-column table with filters, bulk actions and export, and two sign-in flows. I extended the platform's existing design system. Launched.

Product designer, SidePay and CoinUp (products of one employer) · May 2024 – January 2025 · contract

- CoinUp, October 2024 – January 2025, the only product designer. A mobile app with mini games and duels. For its second version after the MVP, I reworked the structure of the interface, the entry to the game through a Telegram bot, the onboarding and the duel cards.
- SidePay, May 2024 – October 2024, alongside my full-time job at Raduga Light. A B2B platform: I mapped the user roles and flows, went from a customer journey map to prototypes, and built the design system. I led a second designer; the team worked in English.

UX/UI designer, Raduga Light (a maker of lighting equipment) · January 2024 – September 2024 · full-time

- More than ten websites and landing pages, UX research and brand books; I extended the company's existing design systems.

UX/UI designer, a real estate agency in Saint Petersburg (contract) · May 2023 – January 2024

- A redesign of the whole website: UX research, a usability test with 22 people, the search, a UI kit.

UX/UI designer, freelance · 2022–2023

- UX concepts, prototypes and handoff for different clients.

SELECTED PROJECTS

Design system for a public-sector HR platform · 2025–2026

One of two designers

- An audit of 24 components of a ready-made library, after which the client chose to build its own system. The header with navigation and most of the basic components are mine; with the second designer I wrote usage rules for the button: when to use it, anatomy, hierarchy, tone and placement. Developers already build the product with it: they get the variables as a file exported from Figma and keep their own component library in code, built to match the system. In development, release in November 2026.

UXdevice, a marketplace for robots · 2026, three months

The only designer, freelance

- 16 pages in four screen sizes, from desktop to phone, and all graphics, including the logo; a design system with three levels of tokens: 188 primitive, 229 semantic and 414 component tokens; a review of the studio's build with 36 issues in three rounds. In the catalog, I argued for one list with a "Show more" button instead of pagination, and the client agreed. Launched.

TON Walk, a walk-to-earn game inside Telegram · 2025, three months

The only product designer

- A survey of 63 people, a test of a clickable prototype in three groups, 94 screens designed within Telegram's limits (its header, the screen size, animations), 46 component sets. The interface texts are in English, and part of the work with the product team was in English. MVP released.

Miningx100, an online store for mining hardware · March 2025 – 2026

The only designer, private client

- More than 60 screens, including the catalog, comparison and request flows; six landing pages; a mining profit calculator from desktop to phone; a design system. I checked the developers' build and commented on 20 screens. Launched.

Concept for a dating service built around events · 2026

The only product designer

- 18 concept screens, a sign-in flow of 24 screens, and a test of a ready-made design system on two screens. Concept.

SKILLS

Design: product design, UX/UI design, user flows, prototyping, responsive web, mobile apps, an app inside Telegram

Design systems: components and variants, design tokens as Figma variables, light and dark themes, UI kits, extending an existing system

Research: surveys, usability tests, prototype tests, customer journey maps

Delivery: developer handoff, design QA of the built product, contrast checks against WCAG AA

Domains: B2B platforms (HR, finance), e-commerce, mobile games

Tools: Figma (variables, components, prototypes), Notion. **AI:** Claude connected to Figma for component drafts; Claude and Grok for research and copy drafts.

EDUCATION

IT HUB, a private college · 2022–2025

Vocational diploma, the program "Design (by industry)"

Preparing to enter the bachelor's program in International Business Administration, WU (Vienna University of Economics and Business), Vienna; studies start in 2028.

LANGUAGES

English B2 · German B1 · Russian native
